Save the Homes has received funding from the European Union’s Horizon 2020 research and innovation program under grant agreement No 892749.

INTRODUCTION

UIPI Renovation Tour

The International Union of Property Owners launched the UIPI Renovation Tour hybrid event series in Europe in September 2021. It aims to bring the European Commission’s (EC) climate targets closer to EU citizens and property owners by leading locally relevant policy debates and proposing practical solutions building on existing European and local initiatives. To stimulate the Renovation Wave, it is crucial to empower citizens and raise awareness, while gathering the views of stakeholders who are crucial partners in making change happen and paving the way towards a greener and more sustainable Europe for all. We strongly believe that a just energy transition in Europe cannot be achieved without the mobilisation of key civil society groups, notably property owners, as they can play a crucial role in engaging, advising and supporting citizens and policy makers on their path towards the energy transition, and ensuring that quality projects are delivered.

As the TripleA-Reno project comes to an end and most exploitable results are ready to be showcased, UIPI decided in agreement with the rest of the project’s consortium to make the first two events of the series part of the TripleA-Reno Roadshow, and use the occasion to disseminate and potentiate market uptake by offering TripleA-Reno and its solutions as practical examples of existing tools in the market to help property owners renovate and for condominium managers to propose to the owners they work with. This report is about the third event.

Objectives

On one hand, as all events of the series UIPI Renovation tour, the aim was to bring the European Commission’s (EC) climate targets closer to EU citizens, by leading a locally relevant policy debate and proposing practical solutions building on existing European and local initiatives. On the other, the aim was also to present TripleA-Reno’s key exploitable results to potential users/buyers. In other words, the idea is to inform citizens and give them the opportunity to clarify any doubts, provide feedback and ask questions, raise awareness, and capitalise on the work done in EU-funded projects, by presenting some relevant results as practical solutions the targeted audience can use to deep renovate their properties.
Adding to this, the goal was also to enable feedback gathering and hear what property owners, condominium managers, policy makers and other relevant stakeholders (namely from banking institutions, the construction sector and architects) had to say. If we wanted to raise awareness about EU’s climate goals, national strategy plans and local programmes, we also wanted to understand what are the views and experiences of those affected by those measures or that will be affected by them. Are policies adapted to reality? Are they feasible? What is working and what is not? What should be improved? Only a bottom-up approach can help answer these questions, so we proposed top-down presentations in the programme to stimulate discussion and debate and collect feedback.

Targeted audience

There were two targeted audiences: one presentational and another online. UIPI worked in association with the Confederación de Cámaras de la Propiedad Urbana (CCPU), Consejo General de Colegios Administradores de Fincas (CGCAF) and Opengela, as the goal was to reach the maximum number of property owners, to be locally relevant and to target Basque property owners and condominium managers. The latter group have a very big replication potential, as they manage multi-apartment buildings composed by many properties and hence capable of influencing several property owners. The online audience targeted was broader and included property owners across Europe, relevant stakeholders, project participants and sister projects.

PREPARING THE EVENT

Date and venue

UIPI hosted the third event of the UIPI renovation Tour in Vitoria-Gasteiz (including a bus tour to see renovation examples in Bilbao from the Opengela project) in the Basque Country (Spain) on 28 October 2021 at Palacio Villa Suso.

Local partnerships

To ensure the local relevance of the event, UIPI counted with the help of the previously mentioned CCPU, CGCAF and Opengela to be able to reach the targeted audience.

Guiding principles and strategy

As some of the main goals of the event were to raise awareness, stimulate the Renovation Wave and potentiate TripleA-Reno key exploitable results’ market uptake, it was decided that the event should
be accessible to all and would be totally free of charge to all participants, to help obtain more registrations and avoid discriminating less wealthy groups of the targeted audience. To attend the event all that was asked from participants was to register. As UIPI is an non-profit NGO, there were no commercial partnerships nor sponsors and the event was entirely funded with allocated budget from the presented EU-funded H2020 projects.

Another guiding principle was to make this event understandable to all. The event targeted Basque property owners and condominium managers and wider audience was expected online; unlike in the first event in Budapest, the streaming of the event was not available in English but only in Spanish. Nevertheless, all the speaker presentations will be rendered available in English on the event page.

We tried our best to obtain gender balance in our programme and with our speakers, as well as with staff and this was achieved.

**Hired services**

To be able to offer a good programme and guarantee the event’s success the following services were hired for the occasion:
- Venue;
- Breaks and lunch catering;
- Ending ceremony catering;
- Technical material and team in charge of sound, video projection and online streaming;
- Bus services (for bus tour in Bilbao);
- Photographer;
- Helping staff (2 hostesses).

All services were hired according to H2020 funding rules (with several quotes obtained for each unless there is a valid justification for it – like exclusivity contracts with venue for instance – and all the process properly documented).

**Contents**

**Programme and speakers**

The event is divided in two sessions. The morning is a policy session which featured keynote speaker presentations to set the scene, and explain to the participants what is expected at EU, national and local level in terms of regulations and support schemes with an energy-efficiency focus. To steer the discussion around the implications that these might entail for relevant stakeholders, decision-makers and affected citizens, this morning session ends with a participative round-table discussion, in which invited speakers have the opportunity to exchange their views and expertise, and all event participants (presentational and virtual) get to ask questions or make comments.

The afternoon session is dedicated to help citizens, property owners and building managers entail with the changes asked from them. A series of practical workshop panels showcase cutting edge
developed solutions, especially adapted to their needs, in the fields of financial aspects and support, technical solutions and innovations, and available assistance to facilitate renovation. The workshops include short presentations or trainings and allow for participants to clear out any doubts they might have by addressing the panellists directly. The afternoon programme also counted with a bus tour to Bilbao, to visit the Opengela office and their renovation projects in surrounding buildings. To end the day and event, there was a short closing speech and a last opportunity for exchange and networking amongst participants.

A copy of the handed out programme and of the speakers list is included in this report’s annex (page 21).

Support documents

Several support documents were produced during this event’s organization for the different parties involved. These are:
- Programme;
- Webpage of UIPI Renovation Tour event series and one for each event in the series;
- Speaker invitations and note (speaker instructions);
- Internal newsletter article;
- Project related articles;
- Confirmed speakers list (with short biography);
- Project newsletter articles;
- Social media posts;
- Privacy policy and data consent forms to clearly inform and request consent from event participants (for the recording and streaming of the event).

Dissemination

Strategy

The event was disseminated internally by UIPI amongst its members using its internal newsletter and communication emails, and also amongst consortium partners of all the EU-funded projects (both from H2020 and Erasmus+ programmes) UIPI is involved with: Renozeb, Triplea-Reno, Drive 0, NRG2Peers, Eenvest, Save the Homes, Re-MODULEES, HOME, Housing+ and EduHome. Dissemination was also made online using UIPI’s website and social media (Facebook, LinkedIn and Twitter).

CCPU, CGCAF and Opengela also disseminated the event in Spain amongst its members and contact networks (mainly property owners and condominium managers). The city council of Vitoria-Gasteiz also publish the event in their internal mailing lists.

Articles

Several articles were produced for the event’s dissemination. Here is a non-extensive list with links/screenshots and information about example publications (who, where and when):

Other contents were also produced for the event such as the whole event recording, photos of the event and PowerPoint presentations. The presentations still need to be edited and will only be rendered available at a later stage. They will be shared through UIPI’s communication channel and posted on the event’s web page as soon as available.

RESULTS

General description of event running

The event ran very smoothly all day. The planned timeline was almost flawlessly respected (slight delay after the first session that was caught up on afterwards). Everything went very well, the only more disappointing side was receiving less participants than expected. UIPI relies on its local partners to engage with their contact networks and generate participation; we have no direct contact with participants in the region. Even though less participants than expected came to the event, most of the participants occupied representative positions of relevant stakeholder groups, having thus a great influence and replication potential. Furthermore, the quality of the interventions was not lesser than in the other two previous events with more participants, neither was the interest show in the matters tackled throughout the event; it was great to see the level of engagement and participation of all that came: many questions and comments were made throughout the whole day.

Apart from the level of participation being a bit lower than aimed, the objectives set were all achieved.
Participants

The event counted with 42 online participants and 47 presental participants. Most participants were Basque condominium managers, property owners and representatives from relevant stakeholder groups (e.g.: engineers, architects, etc), meaning that the targeted audience was reached.

Challenges and lessons learned

During the preparation phase, the hardest tasks were confirming all the speakers and reaching our objective of registrations given the fact that it partly occurred during Summer holidays season. This problems were nevertheless overcome with the help and hard work of all involved organisations.

As previously mentioned, despite our efforts to stimulate registrations and push our local partners to increase their dissemination and promotional efforts, we did not reach our set target of 60 physical participations and 50 online. To avoid this problem in the future, and it was not due to lack of communication efforts, we will aim for bigger cities (where it is easier to involve more participants).

Main takes and feedback during the morning sessions of the event

Welcome session

Isabel Martí, president of the Association of Property Owners of Alava welcomes as host in her city Vitoria. Joàn Rafols intervenes on behalf of the President of the Confederation of Chambers of Property and Urban Property Owners Associations of Spain (CCPU), who has not been able to attend, and makes a very positive assessment of UIPI's effort to bring the aid from the European funds closer to citizens and owners. He takes the opportunity to comment some of the last legislative decisions that affect private property owners, taken by the central Government, emphasizing the worrying topic and of general interest as it is the control of rents. Regarding the rehabilitation of buildings, he highlights the participation of the private initiative to correctly articulate the European funds, claiming the role of the Spanish Chambers of Urban Property.

Policy session: “Setting the Scene”

Pau García, Directorate-General for Energy of the European Commission, began his presentation by explaining the objectives of the Renovation Wave program for the renovation of buildings. He explained that European funds must be combined with other public funds, but with the need to mobilize private capital. All the regulation will be implemented through the "Fit for 55" program, which the EU launched last July, in which all the Directives with energy content will be reviewed. He briefly explained the work being carried out by the European Commission with new legal, financial and energy measures, while acknowledging that there is still a lot of work to be done.

Izaskun Bilbao, Spanish member of the European Parliament, in a speech of a markedly political nature, came to emphasize that citizens must be involved in order to meet the energy efficiency objectives. She spoke of the Fit for 55 program, which incorporates up to 15 new European laws and will
review the energy directives, especially the EED, which will soon be taken to the plenary session of the Parliament. There is community money for the Renovation of buildings, combining public policies with private initiative and the individual involvement of citizens.

**Miguel Baiget-Llompart**, Deputy Director General of the Ministry of Transport, Mobility and Urban Agenda, gave us an overview from the position of the Spanish government, explaining "what we are doing from the Ministry". He explained that in Spain there is a huge potential for Rehabilitation for different reasons:

- 50% of the building stock is from 1980, i.e., a lot to update.
- 80% of the Energy Certificates are in the worst E-F and G letters.
- Spain is far from the levels of the main European countries.

The government has strategic instruments at its disposal, such as:

- the National Energy and Climate Plan that foresees 1.2 million homes to be rehabilitated by 2030, which means going from 30,000 homes/year in 2020 to 300,000 homes/year in 2030.
- Urban Agenda Regeneration Plan, with 3,400 MEUR of investment in rehabilitation in the residential environment by June 2026.
- Aid programs through the autonomous governments, with 1,151 MEUR to be shared with the Autonomous Communities and distributed in proportion to the residential units in each region.
- Fiscal measures, with deductions in the IRPF, Personal Income Tax, depending on the energy improvement carried out.
- Financial Measures, with ICO guarantees to help Communities of Owners. This is a new line of 1,100 MEUR.
- Regulatory Framework, to improve legal certainty and facilitate refurbishment.

To conclude, he stated "we are facing an unprecedented opportunity, which requires the intervention of the Public Administration and all the agents involved in the residential sector".

**Ignacio de la Puerta**, Director of Territorial Planning and Urban Agenda of the Basque Government, began by saying that we are facing "an opportunity and a need" and that a key factor is the owners of the buildings. Before going into his presentation, he wanted to make some critical reflections on the previous intervention of the representative of the Spanish Government:

- very short implementation deadlines. The period 2020-2026 means that, in order to quantify and justify the consumption, we should finish the rehabilitation in 2025. Impossible.
- of the total amount of 70,000 MEUR, only 2% (1,150 MEUR) for the residential sector.
- the aid application mechanism is not very transformative.
- a conflict is foreseen at the moment of justifying the objectives achieved.

Having said this, Ignacio de la Puerta explained the model of Urban Regeneration in the Basque Country, with important interventions at the neighborhood level, to improve comfort and habitability conditions, and monitoring consumption, of which only 18% of the dwellings have a good level of comfort. He ended his speech by returning to be critical of the current situation, in which we do not invest in our own housing, that we do not do any maintenance and that this does not lead to guarantee the minimum conditions of habitability.
Round table discussion with stakeholder interventions

During the discussions that followed this initial round, key sectoral stakeholders and the participants have had the chance to share their views. Belén Gutiérrez, moderator, introduces the speakers with a question to each of them.

Isabel Martí, as president of the Homeowners’ Association of Alava, is asked if she considers the proposals heard in the previous political session to be realistic. Isabel replies that "there is a need for advice and logistical support to the Communities of Owners". She adds that such support management should not entail a higher cost and that it should be assumed by the Administration itself.

Juana Blasco, representative of the Association of Property Administrators of Valencia and Castellón, asks how the Property Administrators can help. Juana Blasco answers that the administrators know the residential buildings and they collaborate directly with the owners, conveying the economic aids and controlling the times. The Administrators' collective participates in many projects promoted by the Administration.

Jimena Ruiz de Landa, president of the Association of Architects of Alava, is asked about the tools for professionals. Jimena takes the opportunity to vindicate the role of architects in any rehabilitation process. The previous tool to any rehabilitation is the architectural project. Rehabilitation is a very complex process, with many unconventional variants, and the management and control of the works is essential, a task that corresponds to the architects. He also denounced the lack of agility in the process of granting building permits by the municipalities.

The last speaker was Luis Alba, president of the Union of Construction Businessmen of Alava-UNECA, to whom Belén Gutiérrez asked about how they are going to cope with the important demand that is going to arise. He starts explaining that UNECA is made up by all the agents of the construction sector: Promoters, Builders, Guilds, Suppliers and material suppliers, etc. He regrets that they have not participated in the elaboration of the legal norms that are being implemented in the Basque Country. He points out a new problem added to the great demand in Rehabilitation, such as the lack of materials. The problem of the supply of certain materials will make it impossible to meet construction deadlines. He ends his intervention as several others, the need to participate of all the agents involved in the sector.

Belén Gutiérrez then posed a question to the air, such as transversality: “What about the average citizen?” Miguel Baiget picks up the gauntlet, who says that it is essential to reach all citizen profiles. For it, he remembers the instrument of financing of the new line of guarantees ICO to cover the costs to which the Communities of Proprietors cannot arrive. Tax deductions also affect the average citizen, provided that there is energy improvement. The aim, Baiget concludes, is to minimize the economic impact on families. Ignacio de la Puerta pointed out that taxation in the Basque Country is different, and that aid has already existed for some time. He criticizes the financing by means of guarantees for the inoperability of the system: the risk committees of the banks are the ones that decide if there is credit or not. This must be changed. He ended his speech by indicating that the cost of management must be assumed and that it affects the final cost of the investment. It is necessary to include the management offices among the costs of the Rehabilitation.

An interesting debate starts from different participants in the room, with questions such as the following: “Where should the citizen go to participate in a project?” Ignacio de la Puerta answered that, in the Basque Country, Opengela works, a management model that can be extended to European level. Later we will see what Opengela consists of.
A couple of interventions directed to Miguel Baiget; the first on the requirement of energy efficiency improvement, which is considered excessive according to the climatic conditions in our country and that, in certain cases, cancels the possibility of starting the Rehabilitation, to which Baiget responds that the energy improvement is a commitment of origin imposed by the EU and that we cannot do anything about it. Another participant: “It is very clear that acting at the level of housing corresponds to the owner, current building level corresponds to the property owner association or vertical owner, but who takes the initiative to act at the neighbourhood level, to which Baiget responds that it is the state administration, regional and local who corresponds to that initiative.

An attendee in the room, as a representative of a real estate company, with properties in Madrid, Barcelona, Pamplona, etc. asks if he can access the aid, with the profile of a large tenant that he presents. Baiget answers that he will have to process it through the Autonomous Communities and that they will be the ones to decide on the matter.

A question to the representative of UNECA: it is more and more difficult to find capable and prepared trades to face certain situations that arise in a Rehabilitation, so training courses aimed at different trades of the construction industry should be carried out. Luis Alba answers that, after a consultation among his associates, a training entity was proposed to do a course and, strangely enough, they found that there was no demand.

An interesting topic was addressed to Miguel Baiget, on the incompatibility between some laws that are currently being processed, specifically, how do you explain to an owner, considered a large holder, that he cannot pass on the cost of the works in the rents of their homes? Baiget replied that this question could take a whole day? That this issue needs to be addressed in the text of the new law, which is a complex law, and that today there is no concrete answer because it is really difficult to reconcile. He softens the situation by recalling the tax improvement included in the new law.

A last question from the floor refers to whether the funds will be properly applied? Miguel Baiget answers that the Energy Certificates should be the tool used to quantify the aid and that an important energy improvement according to the Certificate will mean a greater aid. For that, the issuance of these Certificates must be greatly improved.

In short, Baiget is optimistic and believes that if we know and we can take advantage of European funds for the rehabilitation of the residential sector.

Feedback after the event

General feedback

The general feedback received during the event and at the end was general very positive. Participants came many times to thank us at the end of the event, claiming that the event was very useful and that they really enjoyed participating.

The participants were all very interested in the practical workshops and bus tour in the afternoon in which practical tools to boost renovation were presented (partly from EU-funded projects), namely TripleA-Reno.
Feedback form

The respondents represent in a rather balanced way homeowners, landlords (with a slight prevalence of small landlords), condominium managers, and real estate sector representatives. Form a general perspective, the majority was very satisfied with this event and almost everyone, with very few exceptions, affirmed that the event met their expectations. Moreover, all the respondents considered that the event was interactive and that it provided them with new learnings or knowledge. Both the speakers and the venue received very positive feedback.

More specifically, even though a good level of satisfaction emerged for all the different sessions, the panels seemed to be slightly more appreciated than the workshops. Among the panels, the second one (round table discussion with stakeholders’ interventions) received the most appreciation. An interesting aspect to consider is that, although a non-negligible number of the respondents were planning a renovation at their home before the event, at the end of the event almost half of them changed their mind about renovation and affirmed that they are more willing to renovate their properties. Finally, regarding the possible future use of the TripleA-reno platform and the board game, the majority said they do not know yet whether they will utilise them or not.

Event coverage

Articles

Vitoria-Gasteiz local press magazine “Dato Economico” asked permission to attend and cover the event both in writing and with photos, which was granted. The article is still not available but will be published here according to provided information: https://datoeconomico.com/

An article about the event was published in UIPI’s internal newsletter and others are still to be written and published on UIPI’s website and social media. This will also be disseminated through all EU-funded projects partnerships.

Organisation partners such as CCPU also published articles about the event in their newsletters.

Videos and other materials

The recording of the streamed event is available on the event page on UIPI’s website, as well as all event photos: https://www.uipi.com/wallonie-owners-on-board/. The presentation is being translated from Spanish to English and will be rendered available soon.
CONCLUSIONS

General conclusions

This experience was overall very positive. The participants, speakers and all others involved were very satisfied with the content presented during the event, the contributions during the round-table discussion and participations during the whole event. The participants showed to be concerned with the lack of coherence in the existing policies at national, regional and local levels which is for them a barrier to renovation as they have a hard time understanding their obligations and support tools available. Such events give them the opportunity to address their concerns and also to have their doubts cleared when possible. This strongly reinforces our belief that such events are extremely useful for awareness raising and to bring policy closer to citizens; two things without which the Renovation Wave will hardly be successful.

This led to the conclusion that these events are also one of the best ways to present EU-funded projects’ results and capitalize on different projects at the same time, by offering the practical solutions developed in a comprehensive way.

We were also pleased with the amount and quality of participations from the audience, which we will analyse and use in our organisations’ activities; this event allowed us to better understand the real situation of Basque owners and will allow us to better represent them.

Given all the above, after this third experience of the event series UIPI Renovation Tour, it remains clear that more events like this are needed and UIPI will do its best to keep on organising them, all over Europe, in the years to come.
